

MGFest

In its 6th year, MGFest stands as the premier US event showcasing creative motion picture design. The festival presents a year-long, regionally focused program of events. The 5-city tour focuses on motion design, sound design, and film & video technology by hosting: art showcases, exhibits, workshops, classes, panel discussions, studio tours, theater screenings and industry mixers.

The use of motion in digital design is an expansive topic and requires an array of skills and resources. The Motion Graphics Festival brings public attention to motion animating, sound design for motion, and the cross-over between motion and interactivity.
